ENDLESS INNOVATION SINCE 1919

Maintenance plans SACMI

Smart Service & Secure Service are the new SACMI assistance packages. Designed for proactive maintenance management, they aim to provide customers with an integrated package of skilled labor and spare parts.

SACMI

AVAILABILITY

Greater line efficiency and availability means trouble-free production

TRAINING

Faster, easier technical training for your workforce

BUDGET PROTECTION

Maintenance costs are fixed, allowing their inclusion in the budget

LOW TCO

Limit the impact of maintenance on plant running and management costs

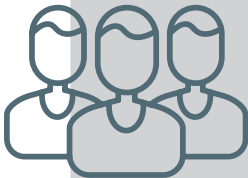

Discover the advantages

SACMI maintenance plans are designed to maximise machine and production performance.

100%

availability of
spare parts
subject to wear

0 Unforeseen
events thanks to a
network of experts
at your service

Up to

20%

more machine /
machine cycle
availability

100%

Customized service

Up to

50%

less
maintenance-related
downtime

Smart Service

Smart Service is the new SACMI service package that takes machine and plant maintenance to the next level by applying a proactive/preventive approach.

Smart Service lets you monitor the status of your machines in real time, plan and optimize work, and keep tabs on costs.

Smart Service merges **technical assistance and spare parts** for SACMI machines and plants into a single package.

Developed to be preventive and proactive, the service allows customers, upon payment of a fee, to set a **fixed maintenance budget** and achieve greater profitability and efficiency.

With SACMI Smart Service, you can periodically and accurately **check 'machine health'** and plan any required maintenance tasks with SACMI technicians.

This means you can organise stocks of **spare parts subject to wear** in advance according to maintenance plans. You can also speed up **training of your technicians/workers** to ensure proper, prompt maintenance management.

The result: with SACMI Smart Service you can **boost plant availability and efficiency**, limiting the impact of maintenance on **running and management costs**.

Secure Service

Extend the operational warranty on your machines by making spare parts replacement in the event of unanticipated failures part of your service packages.

Needless to say, being able to make use of an all-inclusive policy becomes increasingly important over the machine/plant lifetime.

Modern SACMI services ensure maintenance is performed according to a sophisticated **preventive logic**. This means stronger guarantees and higher added value for the customer.

With Secure Service, those guarantees span from routine maintenance to any **unscheduled work** on the plant following unexpected breakdowns or problems.

Smart Service and Secure Service packages are available **on both new and installed machines**.

In the case of existing plants, SACMI performs a **preliminary audit** to help you set up the best, most suitable assistance plan that focuses on your needs and the profitability of your investment.

Compare the plans

Focusing on your needs.

The SACMI team is always at your side. We'll help you choose the plan that best matches the

characteristics of your plant and your production goals.

Plant and machines health check-up
